

EXP 10- PIR SENSOR IN PROTEUS USING ARDUINO

CODE:

```
int Status = 13; // LED pin
```

```
int sensor = 12; // PIR sensor output pin
```

```
void setup()
```

```
{
```

```
    Serial.begin(9600);
```

```
    pinMode(sensor, INPUT);
```

```
    pinMode(Status, OUTPUT);
```

```
}
```

```
void loop()
```

```
{
```

```
    int state = digitalRead(sensor);
```

```
    Serial.print("Sensor State: ");
```

```
    Serial.println(state);
```

```
    if (state == HIGH)
```

```
    {
```

```
        digitalWrite(Status, HIGH);
```

```
        Serial.println("Motion Detected!");
```

```
    }
```

```
    else
```

```
    {
```

```

digitalWrite(Status, LOW);

Serial.println("No Motion");
}

```

```

delay(500);
}

```
